

Self Adhesive Security Seals & Tapes

MVR - Cover (clear) vinyl seal

Type MVR

Used where covert security and protection is required. The face material is clear vinyl, which has a good tensile strength and is backed with very high tack adhesive and has the special interlocking security cuts. The seals are overprinted with U.V. (invisible) text and invariably sequentially numbered in white. Tampering can easily be detected by the use of a U.V. light source. Especially useful for clandestine or covert surveillance.

Type KC

Similar to the type MVR but this seal does not have security cuts, as there is a VOID/OPENED security image, which is revealed if the seal is lifted. This image shows clearly under a U.V. light source.

- Supplied in strips or reels, die cut and waste stripped.
- Single or double interlocking security cuts (type MVR).
- Customised design, text or logo with optional sequential
- One standard size, (85 x 25mm) but any shape or size can be supplied.
